<u>Steps to run code:</u>

Decompress the zip file, and you should have a file structure like so:
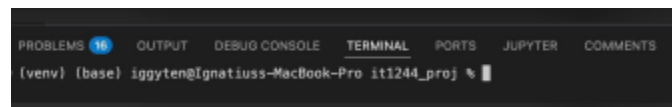

```
Project
├── datasets
│   ├── invoice.csv
│   ├── clients.csv
├── code
│   ├── code.ipynb
├── README.pdf
├── Report.pdf
```

On Linux/MacOS:
1. Set up your virtual environment. This can be done by running **python3 -m venv venv**
2. Afterwards, activate your virtual environment. This can be done by running **source venv/bin/activate**

To check if your virtual environment is running, verify that your terminal has the (venv) prefix like so:

3. Install all required python libraries. This can be done by running **pip install -r requirements.txt**
